# Financial Performance

#### Revenue

Total revenue for the year is \$8.2 million, up 23% on the prior year amount of \$6.7 million. Platform access revenue was \$4.5 million (2018: \$4.1 million) while recognised Implementation revenue was \$2.4 million (2018: \$1.7 million). Implementation revenue is deferred when invoiced and recognised over the initial term of an Enterprise Channel Customer contract. Implementation revenue includes \$0.6 million of deferred revenue recognised early, following cancellation of the contract with Royal Bank of Canada.

As at 31 March 2018 the Annual Recurring Revenue from platform access fees amounted to \$4 million.

The Group also generated \$0.4 million of revenue for additional services such as Marketing as a Service, referral fees and a proof of concept, with existing and prospective Enterprise Channel Customers.

Grant Income received mainly from Callaghan Innovation, a Crown entity of New Zealand was \$0.8 million (2018 \$0.5 million).

#### Expenditure

Total expenditure for the year is \$16.8 million, which represents a significant decrease of \$7.3 million, or 30% year on year (2018: \$24.1 million). Cost management and control has been a key objective for this financial year with a focus on alignment of costs to the requirements of the business.

Over the course of the year, costs have progressively reduced, for the first half year total expenditure was \$9.9 million, this has reduced to \$6.9 million (down 31%) in the second half of the year. This compares to \$11.2 million for the second half of the last financial year. The Group is continuing to work with a keen focus on cost control against the backdrop of continued expected revenue increases.

Total employee costs have reduced by \$3.0 million a decrease of 23% year on year, Headcount has reduced, with the average during the last quarter of the year being 66 full time equivalents across the group compared to 100 staff for the same quarter last year. This reduction has been managed to ensure that the Company continues to have capacity to service Enterprise Channel Customers and to seek and secure new revenue opportunities.

Other significant cost savings in the year have been marketing spend, down by 86%, a reduction of \$2.1 million compared to marketing spend last financial year. Marketing focus this year has been on supporting growth of users from Enterprise Channel Customers who now account for over 60% of total users.

Cost reductions have also been achieved in hosting and infrastructure as we have moved to new hosting environments, and travel and professional fees including having brought legal resources in house.

#### Cash flows

Annual net cash outflows from operations were \$9.3 million, down by 44% year on year, reflecting a 27% increase in receipts from Enterprise Channel Customers and government grants and a 25% reduction in payments to our people and suppliers. Quarter on quarter there has been a reduction in net cash outflows from operating activities, reducing from \$3.2 million in the first quarter to \$1.3 million in the last quarter, a trend that is expected to continue.

The cash flows from financing activities records the \$2.5 million short term lending provided to the Company during the year, see note 6 of the Preliminary Final Report Financial Statements for more detail on the loan and subsequent settlements since the end of the year.

Cash and cash equivalents at 31 March 2019 were \$1.4 million (2018: 7.3 million). Subsequent to the year end the Company completed a rights issue and share placements raising circa A\$6.0 million before costs.

#### 6. Short-term loan and fair value of conversion option

#### Short term loan

During the year, the Company entered into a short-term funding facility intended to provide the Company with working capital to allow time to conclude its capital raise with a total sum of \$2.5 million drawable under the facility. The loan was initially taken out of 17 October 2018 and terms varied on 16 January 2019. The key commercial terms of the facility are:

- The interest rate is 6.5% per annum until 31 December 2018, and 12% after that date.
- Completion and work fees are payable.
- Advances are secured by way of a general security agreement over the material assets of the Company and subsidiaries.
- Contingent of the timing and nature of the capital raise lenders have the option to convert any portion of the total loan to ordinary shares. Under certain situations this conversion may be exercised at a discount to the current market price of the shares. This option was introduced at 16 January 2019.

As a result of the conversion option introduced on 16 January 2019 the loan is accounted for as two separate components, the pure debt portion and the loan conversion option.

Where there are financial instruments with embedded derivatives who economic characteristics are not closely related to that of the host financial instrument, the embedded derivative is separated and accounted for separately.

For embedded derivatives that provide the option to settle the arrangement with the Company's equity instruments, the derivative is classified as equity if the conversion feature results in a fixed amount of debt converted into a fixed amount of equity instruments. Otherwise they are classified as liabilities.

Derivatives classified as liabilities are initially recognised at fair value and then subsequently measured at fair value at each reporting date. The gains and losses are recognised as finance expenses or income in the Statement of Comprehensive Income. In these cases, the debt portion of the financial instrument is presented as borrowings and measured at amortised cost.

#### Accounting for the debt portion of the loan

The loan is assumed to be settled on 24 May 2019 (see settlement paragraph below). At 31 March 2019 the carrying value of the loan at amortised cost was \$2,637,000.

The fair value of the loan at 31 March 2019 is estimated to be \$2,778,000. Since the loan was callable at that date, the fair value is based on the principal, interest and other fees that were outstanding at that date. This is classified as a level 2 fair values in the fair value hierarchy.

#### Finance expense of the debt portion

The finance expense is made up of interest plus completion and work fees estimated over the life of the loan. The finance expense is accounted for using the amortised cost basis. Total finance expense up to 31 March 2019 was \$683,000.

#### Fair value of the derivative conversion option

As a result of the conversion option introduced at 16 January 2019 a derivative was recognised for the loan conversion option.

The fair value of the conversion option was initially calculated as at 16 January 2019 and has been revalued as at 31 March 2019. The calculation took account of the market price of the ordinary shares, potential discount options, loan exit fees that were payable on the proportion of the loan not converted, and the likely quantum of shares that could be converted given the cap on the quantity of shares available for conversion due to takeover regulations.

Changes in the value of the option at 31 March 2019 are recognised in the Consolidated Statement of Comprehensive Income as 'Fair value loss on Ioan conversion option' (note 3.)

#### 7. Loss per share

	2019 000's	2018 000's
Total comprehensive loss attributable to shareholders	(\$9,267)	(\$17,366)
Ordinary number of shares	518,301	518,301
Weighted average number of shares on issue	518,301	476,778
Basic and diluted loss per share	(\$0.02)	(\$0.04)

Basic earnings per share is calculated by dividing the comprehensive profit or loss attributable to ordinary shareholders of the Group by the weighted average number of ordinary shares on issue during the year.

Diluted earnings per share is determined by adjusting the comprehensive profit or loss attributable to ordinary shareholders and the weighted average number of ordinary shares on issue for the effects of all dilutive potential ordinary shares, which comprise share options. Potential ordinary shares are treated as dilutive when, and only when, their conversion to ordinary shares would decrease earnings per share or increase the loss per share. The potential shares are anti-dilutive in nature. The diluted loss per share is therefore the same as the undiluted loss per share. The number of shares and weighted average number of shares has been adjusted for the dilutive impact of bonus shares that arise from the rights issue completed in May 2019
